

**Monitor pets when outside, even within a fenced in yard**

**Secure food attractants**

- E.g., garbage, pet food, bird seed
- Remove food bowls if fed outside

**Be alert when walking at dawn or dusk with pets**

- Coyotes are crepuscular, meaning they are the most active during this time

**Keep pets inside or leashed when outside**

**Do not feed or approach coyotes**

- This will cause the coyote to associate you and your home as a food source

**Haze coyotes out of your yard**

- Bang pots and pans, yell, or use an air horn

**Carry a noise maker/airhorn when walking pets**

**Close off crawl spaces to prevent denning**

**If warranted, lethal removal is an option**
